Internship period: Nov 2026 - Feb 2027

BACKGROUND

- An aspiring Year 3 Software Engineering student specializing in the intersection of high-performance backend architecture and intuitive, user-centric digital experiences.
- Driven by a rigorous approach to software testing and usability standards, ensuring digital touchpoints and application features are seamless, reliable, and highly engaging for the end-user.
- Skilled at translating complex business requirements into logical, well-rationalized digital journeys, balancing architectural constraints with visually stunning, high-usability interface designs.
- Familiar with Agile and Scrum frameworks and version control using Git by maintaining rigorous workflow hygiene through efficient branching strategies and naming convention, code reviews and conflict resolution.

WORK EXPERIENCE

Monash School of IT

FIT2099 (OOD and Implementation) Class Assistant

Jul - Sep 2026

- ❖ Assist lecturer in conducting workshops, tutorials and bootcamp interviews. Provide guidance to students on teaching material, installation and git setup.

Monash School of IT

FIT1051 (Fundamental in Java) Class Assistant

Mar - May 2026

- ❖ Explain concepts and best coding and design practice in terms of object-oriented mindset and the importance of carrying forward to future units and workforce.

Leapseed

Software Engineer Intern

Dec 2025 - Present

- ❖ Manage and maintain Schola School Management codebase.
- ❖ Create new features, web interface and templates for upcoming functionalities.
- ❖ Relevant tools and software used: PHP, Laravel, Bootstrap, GitHub, SourceTree, Laragon, Figma

EDUCATION

BACHELOR OF SOFTWARE ENGINEERING

MONASH UNIVERSITY

2024 — 2027

Current CGPA: 3.87

Relevant coursework: Software Architecture and Design, Databases, Discrete Maths, Object Oriented Design and Implementation (Java), Software Engineering Process and Management,

Software Quality and Testing, Algorithm and Data Structures, Engineering Smart System (Electrical and Computer System), Engineering Numerical Analysis

**MONASH UNIVERSITY FOUNDATION YEAR
SUNWAY COLLEGE**

2023 — 2024

MUFY Score: 97.63

MUFY Subject Award for Top Scorer in Advanced Mathematics Unit 1 and Unit 2, Monash University High Achiever Award

SMK TINGGI ST DAVID, MELAKA

2018 — 2022

- ❖ SPM 2022 - Straight A+ Achiever (9A+)
- ❖ JPA LSPM Scholar
- ❖ 2022 National Debating Competition 5th Placing

PROJECTS

Sore High Catalog (React, NextJS, GSAP)

- A presentable and in-used landing page / catalog for [@sorehigh](#) tshirt branding business with a touch of Awwward winning theme using GSAP and React.
- [Sore High github](#)
- [Sore High hosted link \(Vercel\)](#)

Travel Planner (NeonDB, Nextjs, GoogleMap API, React, Lucide-React, UploadThing API, GitHub OAuth, PostgreSQL)

- A full-stack trip planning web app that enables users to sign in with their GitHub account, create personalized travel itineraries and visualize destinations on an interactive Google Map. Integrated a 3D rotating globe to showcase visited locations and implemented a drag-and-drop itinerary planner for seamless trip organization.
- [Travel Planner github](#)
- [Travel Planner hosted link \(Vercel\)](#)

KawanKawan Social Media App (React, GitHub OAuth, TailwindCSS, Supabase)

- A SaaS social media platform that allows user authentication, image upload, dynamic voting and commenting system, community groups. The app is designed to be mobile responsive with modern glassmorphism aesthetic effects.
- Users can share posts, interact with others and build communities. SUser can create posts with images and captions, dedicate posts to a community, interact by liking / unliking, comment or reply comment on posts, create, explore and browse communities.
- [KawanKawan Social Media github](#)
- [KawanKawan Social Media App \(Vercel\)](#)

Chatty Messaging App (MERN, SocketIO, JWT, Cloudinary, Axios)

- A full-stack real-time messaging application built with the MERN stack. It supports instant communication with text and image messages, secure authentication, clean and modern UI.
- [Chatty github](#)
- [Chatty hosted link \(Render\)](#)

Crypto Dashboard using CoinGecko API (React, Rechart, CoinGecko API)

- Responsive crypto tracking web application that displays real-time cryptocurrency data using the CoinGecko API. Users can browse top cryptocurrencies, view detailed metrics, and explore a 7-day interactive chart powered by Recharts.
- [Crypto Dashboard github](#)
- [Crypto Dashboard hosted link \(Vercel\)](#)

JobYourLove Job Portal App (MERN)

- A job portal app for applicants (job seekers) to browse and apply for career opportunities and companies (job hunters) to manage job openings via CRUD operation. Specific role based authentication for unique role and task provided for both parties.
- [JobYourLove github](#)

Habit Tracker Mobile App (AppWrite, React Native, Expo)

- A simple and intuitive Habit Tracker mobile application built using React Native, Expo and Appwrite. This app allows users to track daily progress, visualize streaks and compete on habit streak rankings.
- [Habit Tracker Mobile git hub](#)

AI Newsletter (Supabase, NextJS, EmailJS, React, Ingest, OpenAI)

- A SaaS platform that allows users to create and authenticate accounts, receive AI-generated newsletters tailored to their interests and preferred frequency.
- [AI Newsletter git hub](#)
- [AI Newsletter hosted link \(Vercel\)](#)

BuyUntillmBroke Ecommerce Web (Stripe, NextJS, Zustand, TailwindCSS)

- A complete shopping flow including cart management and secure checkout using Stripe. Provided if I am a registered business under the Malaysian government and law enforcement, the web can be fully functional by proper integration to Stripe account.
- Ecommerce Web github (steps provided in README.md on how to play around with the checkout function)
- [Ecommerce Web github](#)
- [Ecommerce Web hosted link \(Vercel\)](#)

Finance Tracker Dashboard (Redux Toolkit, Material UI, Recharts, MongoDB, ExpressJS, NodeJS)

- Finance Tracker with Machine Learning Predictions using Regression, Recharts, Redux Toolkit and Material UI.
- [Finance Tracker github](#)

Personal Portfolio (Tailwind CSS, React, Lucide-React, Emailjs)

- Clean, responsive design optimized for all devices including functional contact form powered, minimal yet aesthetic UI styled with Tailwind CSS, with dark/light mode toggle.
- [Personal Portfolio github](#)
- [Personal Portfolio hosted link \(Vercel\)](#)

Ticket To Ride Game (Java Swing)

- Applied Java's object oriented principles and advanced design principles to build an locally executable London Edition of Ticket To Ride game. An in depth step to run the executable, environment prerequisite and file structure, alongside design rational docs explaining the

reasoning behind the teams decision making regarding design choices, cardinalities, software quality and alternative design to each aspect.

- The game includes features like route claiming, ticket drawing, game initialization and termination, interactive timer.
- This game is a project under FIT3077 (Software Architecture and Design)
- [Ticket To Ride gitlab](#)

Console Based Explorer Game (Java)

- Applied Java's object oriented principles (SOLID, enums, interface, polymorphism, inheritance) using the provided game engine to create an Explorer vogue-based games.
- The game includes features like teleportation, game actor interactions, and win-lose simulation.
- This game is a project under FIT2099 (Object Oriented Design)
- [Rogue-based Game gitlab](#)

WEIGHTLIFTING MANAGEMENT SYSTEM (Python, HTML, CSS, JS, Hypothesis, Selenium and unittest)

- Develop a WLMS that registers athletes, validates for registration of athletes, and determines barbell setup for a liftoff.
- Conduct unit tests using Python's unittest, mocking, Selenium and Hypothesis. Identified and prioritised quality attributes for the WLMS, designed test cases using black and white box tests, different testing techniques and selected appropriate quality assurance strategies. Implement software tests following a documented plan, modern programming technique and best practices.
- This project is under FIT2107 (Software Quality and Testing).
- [WLMS github](#)

SKILL

SOFTWARE:

Language: Python, Java, Javascript, Typescript, HTML, CSS

Database: MongoDB, Oracle, Supabase, NeonDB

Library: Matplotlib, Numpy, Unittest, Pymata4, Selenium, Hypothesis, SocketIO, GSAP

Framework: React, NextJS, ExpressJS

Tool: Postman, GitHub, Vercel, Render

Testing: Unittest, Mocking, Selenium, Mokito, and Hypothesis

DESIGNING:

Canva, Figma, SolidWork

COCURRICULAR EXPERIENCE

Monash Athletics Club (MAC)

Publicity Officer

July 2026 - Present

- ❖ Manage MAC social media page
- ❖ Create and promote club weekly events and track meets.
- ❖ Design merchandise for club members and SUKIPT representatives.
- ❖ Facilitates communication regarding activity promotion, training blocks and meeting agendas in Whatsapp group chat.

- ❖ Manage EAMMSS social media page.
- ❖ Create visual posts to promote events, captivating captions for event promotions, post-events reel and videos.

LANGUAGE

LANGUAGE: English (Proficient), Malay (Proficient), Chinese (Native)
