Internship period: Nov 2026 - Feb 2027

BACKGROUND

Year 3 Software Engineering student driven by a rigorous approach to software testing and usability, prioritising seamlessness and engagement for the end-user. Familiar with Agile/Scrum frameworks, version control using Git by maintaining workflow hygiene through efficient branching strategies and naming convention, code reviews and conflict resolution.

WORK EXPERIENCE

Monash School of IT

FIT2099 (OOD and Implementation) Class Assistant

Jul - Sep 2026

- ❖ Assist lecturer in conducting workshops, tutorials and bootcamp interviews. Provide guidance to students on teaching material, installation and git setup.

FIT1051 (Fundamental in Java) Class Assistant

Mar - May 2026

- ❖ Explain concepts and best coding and design practice in terms of object-oriented mindset and the importance of carrying forward to future units and workforce.

Leapseed Software Engineer Intern

Dec 2025 - Feb 2026

- ❖ Manage and maintain Schola School Management. Conduct UAT for Akademi Dalam Industri (ADI) webpage.

EDUCATION

BACHELOR OF SOFTWARE ENGINEERING, MONASH UNIVERSITY

2024 — 2028

Current CGPA: 3.923

Relevant coursework: Software Architecture and Design, Databases, Object Oriented Design and Implementation, Software Engineering Process and Management, Software Quality and Testing, Algorithm and Data Structures

PROJECTS

VolunteerConnect (MERN, Cloudinary, Axios, EmailJS, SocketIO)

- Lead the project as a System Architect role, leading the agile team to build an app that bridges the gap between volunteers, community and non-profits organisations in volunteering participation, attendance tracking, reporting and admin overview. [VolunteerConnect github](#)

Sapu - Cash Flow Forecaster (FARM)

- Cash-Flow Forecaster that allows users to keep track of any recurring bill or income in their account, project their future forecast by customising their forecast window days, threshold and starting balance. [Sapu github](#)

Ticket To Ride Game (Java)

- Java OOD and advanced design principles to build an executable Ticket To Ride game. Design rational explaining the reasoning behind design decision making regarding design choices, cardinalities, software quality and alternative designs. [Ticket To Ride gitlab](#)

Sore High Catalog (React, NextJS, GSAP)

- A presentable and in-used landing page / catalog for [@sorehigh](#) tshirt branding business with a touch of Awwward winning theme using GSAP and React. [Sore High github](#)

Crypto Dashboard (React, Rechart, CoinGecko API)

- Responsive crypto tracking web application that displays real-time cryptocurrency data using the CoinGecko API. Users can browse top cryptocurrencies, view detailed metrics, and explore a 7-day interactive chart powered by Recharts. [Crypto Dashboard github](#)

AI Newsletter (Supabase, NextJS, EmailJS, React, Ingest, OpenAI)

- A SaaS platform that allows users to create and authenticate accounts, receive AI-generated newsletters tailored to their interests and preferred frequency. [AI Newsletter github](#)

Weightlifting Management System (Hypothesis, Selenium and unittest)

- Unit tests using Python's unittest, mocking, Selenium and Hypothesis. Identified and prioritised quality attributes for the WLMS, designed test cases using black and white box tests, different testing techniques and selected appropriate quality assurance strategies. [WLMS github](#)

SKILL

Language: Python, Java, Javascript

Data: MongoDB, R

Framework: React, NextJS, ExpressJS

Tool: Postman, GitHub, Vercel, Render, Docker

Testing: Unittest, Mocking, Selenium, Mokito, Hypothesis
